

LAB GUIDANCE

1. Create all required files in the views folder for timetables.

Following others views like subjects, do the same for timetables views, create a create, edit, index, show and table blade file.

2. Import subject, day and hall model in timetable model.

3. Add relationships to those models.

```

1  /**
2   * Get the subject from timetable.
3   */
4  public function subject()
5  {
6      return $this->belongsTo(Subject::class);
7  }
8
9  /**
10   * Get the day from timetable.
11   */
12  public function day()
13  {
14      return $this->belongsTo(Day::class);
15  }
16
17  /**
18   * Get the hall from timetable.
19   */
20  public function hall()
21  {
22      return $this->belongsTo(Hall::class);
23  }

```

4. In the timetable controller, add this code to the index method.

```

1  /**
2   * Display a listing of the resource.
3   *
4   * @return \Illuminate\Http\Response
5   */
6  public function index()
7  {
8      $timetables = StudentTimetable::with('subject', 'day', 'hall')->get();
9      return view('timetables.index', compact('timetables'));
10 }

```

5. Rename all primary keys as id.

```
1 $table->increments('id');
```

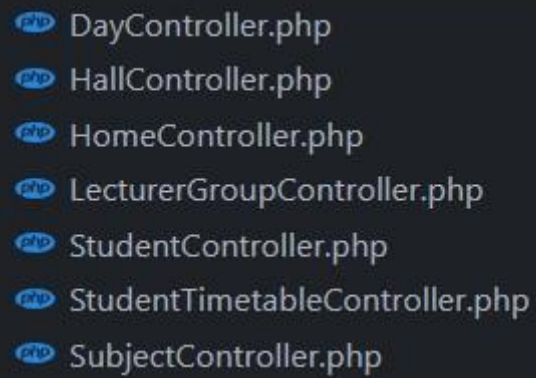

In a migration file for all tables, make sure the primary key is named as “id” to ensure the relationships work as intended.

6. In template.blade.php, add the following code to show the button for timetables.

```
1 <li class="nav-item">
2     <a href="{{ route('timetables.index') }}" class="nav-link">
3         <i class="far fa-circle nav-icon"></i>
4         <p>List of Timetables </p>
5     </a>
6 </li>
```

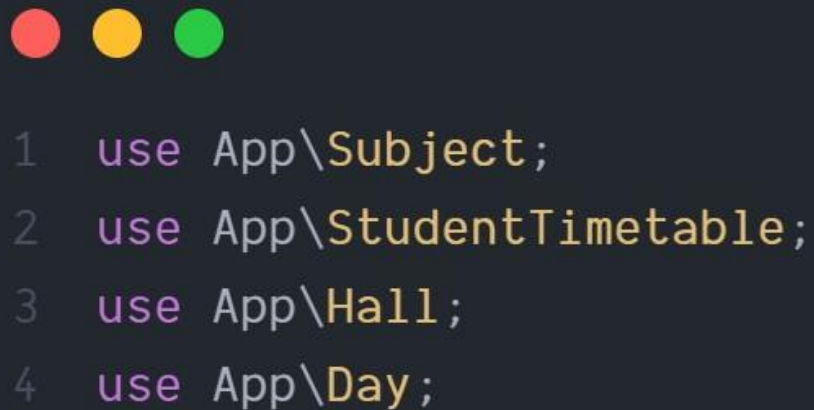

7. Add timetables to routes.
8. Make sure the controllers are named properly.

```
1 Route::resource('/timetables', 'StudentTimetableController');
```

- php DayController.php
- php HallController.php
- php HomeController.php
- php LecturerGroupController.php
- php StudentController.php
- php StudentTimetableController.php
- php SubjectController.php

9. Import these models into TimetableController.

```
1 use App\Subject;  
2 use App\StudentTimetable;  
3 use App\Hall;  
4 use App\Day;
```

10. Add source code to timetables/table.blade.php

```

@section('content')
    <div class="row px-2 mb-3" style="justify-content: space-between">
        <div class="">
            <h4 class="font-weight-bold">Student Timetables</h4>
        </div>
        <div class="">
            <a class="btn btn-success" href="{{ route('timetables.create') }}"> <i class="fas fa-plus mr-1"></i> New
                Timetable</a>
        </div>
    </div>

    @if ($message = Session::get('success'))
        <div class="alert alert-success">
            <p>{{ $message }}</p>
        </div>
    @endif

    @if ($message = Session::get('failed'))
        <div class="alert alert-danger">
            <p>{{ $message }}</p>
        </div>
    @endif

    <table class="table table-bordered">
        <tr>
            <th>No.</th>
            <th>Day</th>
            <th>Subject</th>
            <th>Hall</th>
            <th>Time From</th>
            <th>Time To</th>
        </tr>
    </table>

```

11. In TimetableController, add the following codes in the create method.

```

1  /**
2   * Show the form for creating a new resource.
3   *
4   * @return \Illuminate\Http\Response
5   */
6  public function create()
7  {
8      $timetables = StudentTimetable::get();
9      $days = Day::pluck('day_name', 'id');
10     $halls = Hall::pluck('lecture_hall_name', 'id');
11     $subjects = Subject::pluck('subject_name', 'id', 'subject_code');
12     return view('timetables.create', compact('days', 'subjects', 'halls', 'timetables'));
13 }

```

12. Add source code to timetables/create.blade.php

```

@extends('layouts.template')
@section('content')
    <div class="row px-2 mb-4" style="justify-content: space-between">
        <div class="">
            <h4 class="font-weight-bold">New Timetable</h4>
        </div>
    </div>

    @if ($errors->any())
        <div class="alert alert-danger">
            <strong>Whoops!</strong> There were some problems with your input.<br><br>
            <ul>
                @foreach ($errors->all() as $error)
                    <li>{{ $error }}</li>
                @endforeach
            </ul>
        </div>
    @endif

    <div class="p-4"
        style="background-color: white; border-radius: 12px; box-shadow: rgba(0, 0, 0, 0.15) 1.95px 1.95px 2.6px;">
        <form method="POST" action="{{ route('timetables.store') }}">...
    </form>
    </div>
@endsection

```

13. In TimetableController, add the following code to the store method.

```

1  /**
2   * Store a newly created resource in storage.
3   *
4   * @param \Illuminate\Http\Request $request
5   * @return \Illuminate\Http\Response
6   */
7  public function store(Request $request)
8  {
9      $result = StudentTimetable::create([
10         'user_id' => auth()->user()->id,
11         'day_id' => $request->day_id,
12         'subject_id' => $request->subject_id,
13         'hall_id' => $request->hall_id,
14         'time_from' => $request->time_from,
15         'time_to' => $request->time_to,
16     ]);
17
18     if (!$result) {
19         return redirect()->route('timetables.index')
20             ->with('success', 'Timetable not created');
21     }
22
23     return redirect()->route('timetables.index')
24         ->with('success', 'Timetables created successfully. ');
25 }

```

14. In TimetableController, add the following code to the destroy method.

```

1  /**
2   * Remove the specified resource from storage.
3   *
4   * @param \App\StudentTimetable $timetable
5   * @return \Illuminate\Http\Response
6   */
7  public function destroy(StudentTimetable $timetable)
8  {
9      $timetable->delete();
10     return redirect()->route('timetables.index')
11         ->with('success', 'Timetabe deleted successfully');
12 }

```

15. Add the following code to the edit method in TimetableController.

```

1  /**
2   * Show the form for editing the specified resource.
3   *
4   * @param \App\StudentTimetable $timetable
5   * @return \Illuminate\Http\Response
6   */
7  public function edit(StudentTimetable $timetable)
8  {
9      $days = Day::pluck('day_name', 'id');
10     $halls = Hall::pluck('lecture_hall_name', 'id');
11     $subjects = Subject::pluck('subject_name', 'id', 'subject_code');
12
13     return view('timetables.edit', compact('days', 'subjects', 'halls', 'timetable'));
14 }

```

16. Add the source code into the timetables/edit.blade.php

```

@extends('layouts.template')

@section('content')
    <div class="row px-2 mb-4" style="justify-content: space-between">
        <div class="">
            <h4 class="font-weight-bold">Edit Timetable</h4>
        </div>
        <div class="">
            <form action="{{ route('timetables.destroy', $timetable->id) }}" method="POST">
                @csrf
                @method('DELETE')
                <button type="submit" class="btn btn-outline-danger"><i class="fas fa-trash-alt mr-2"></i> Delete</button>
            </form>
        </div>
    </div>

    @if ($errors->any())
        <div class="alert alert-danger">
            <strong>Whoops!</strong> There were some problems with your input.<br><br>
            <ul>
                @foreach ($errors->all() as $error)
                    <li>{{ $error }}</li>
                @endforeach
            </ul>
        </div>
    @endif

    <div class="p-4" ...
</div>
@endsection

```

17. Add the following code to the update method in TimetableController.

```

1  /**
2   * Update the specified resource in storage.
3   *
4   * @param \Illuminate\Http\Request $request
5   * @param \App\StudentTimetable $timetable
6   * @return \Illuminate\Http\Response
7   */
8  public function update(Request $request, StudentTimetable $timetable)
9  {
10     $request->validate([
11         'day_id' => 'required',
12         'subject_id' => 'required',
13         'hall_id' => 'required',
14         'time_from' => 'required',
15         'time_to' => 'required',
16     ]);
17
18     $result = $timetable->update($request->all());
19
20     if (!$result) {
21         return redirect()->route('timetables.index')
22             ->with('failed', 'Timetable not updated');
23     }
24
25     return redirect()->route('timetables.index')
26         ->with('success', 'Timetables updated successfully');
27 }

```

18. Update the show method in TimetableController matches the following code.

```

1  /**
2   * Display the specified resource.
3   *
4   * @param  \App\StudentTimetable  $studentTimetable
5   * @return \Illuminate\Http\Response
6   */
7  public function show(StudentTimetable $timetable)
8  {
9      return view('timetables.show', compact('timetable'));
10 }

```

19. Add the source code into the timetables/show.blade.php

```

@extends('layouts.template')
@section('content')
    <div class="row px-2 mb-4" style="justify-content: space-between">
        <div class="">
            <h4 class="font-weight-bold">Timetable Details</h4>
        </div>
        <div class="">
            <a class="btn btn-outline-primary" href="{{ route('halls.edit', $timetable->id) }}"> <i
                class="fas fa-edit mr-1"></i>Edit</a>
        </div>
    </div>

    <div class="row" ...
    </div>

    <div class="mt-4">
        <a class="btn btn-outline-primary" href="{{ route('timetables.index') }}"> Back</a>
    </div>
@endsection

```
